

Declaration

I confirm that I worked with Dr Deva Subasic de Azevedo at the Emergency Department of Hospital Municipal M'Boi Mirim - Dr. Moysés Deutsch from January 2019 to December 2021.

During this period, Dr Deva worked predominantly with ambulatory and outpatient presentations. Our Emergency Department functions as a first point of contact for the community, receiving a high volume of undifferentiated presentations without prior referral.

Following independent clinical assessment, patient management typically involved:

- Treatment and discharge home for low-acuity and primary care presentations.
- Ongoing management of chronic conditions and their exacerbations.
- Coordination of hospital admission when clinically required.
- Referral to appropriate specialist or community-based services.

Dr Deva routinely assessed and managed patients across the full age spectrum, from children to elderly patients, providing longitudinally relevant care within single encounters. The majority of presentations included:

Primary Care / General Medicine:

Acute undifferentiated presentations such as upper respiratory tract infections, urinary tract infections, skin and soft tissue infections, as well as exacerbations of chronic conditions including asthma, COPD, hypertension, and diabetes.

Paediatrics and Women's Health:

Febrile illnesses, minor injuries, early pregnancy-related concerns, and gynaecological infections, requiring age-appropriate assessment, reassurance, safety-netting, and follow-up planning.

Mental Health:

Initial assessment, risk evaluation, and management of patients presenting with common psychiatric conditions, including appropriate referral and follow-up planning.

Procedural Skills Relevant to General Practice:

Wound assessment and care, suturing, incision and drainage of abscesses, and basic fracture management.

Dr Deva consistently demonstrated strong clinical judgement, effective communication skills, and a patient-centred approach. She worked safely and independently within her scope of practice and showed particular strength in managing patients from diverse cultural, socio-economic, and marginalised backgrounds. All these skills would be invaluable if she would like to practice as a primary care physician.
