

Declaration

I confirm that I worked at Hospital Municipal M'Boi Mirim - Dr. Moysés Deutsch as a medical practitioner in the Intensive Care Unit from February 2018 to December 2021. During this period, I regularly received patients referred and handed over from the Emergency Department, including patients initially assessed and managed by Dr Deva Subasic de Azevedo.

In my role, I had direct professional interactions with Dr Deva through clinical discussions, referrals, and structured handovers of patients whose conditions required escalation of care. These interactions provided me with insight into her clinical judgement, assessment skills, and approach to patient management at the point of first presentation.

Dr Deva worked in an Emergency Department that serves as a primary point of entry to the hospital for the community, managing a large volume of undifferentiated outpatient presentations. The majority of patients were assessed, treated, and discharged home.

Patients referred to ICU were typically identified following thorough initial assessment, stabilisation, and appropriate escalation by Dr Deva. Her referrals were clinically appropriate, clearly communicated, and supported by relevant investigations and management already commenced.

Based on my experience receiving these patients, Dr Deva demonstrated strong capabilities in:

- Initial assessment and management of acute undifferentiated conditions.
- Recognition and management of chronic disease exacerbations (including asthma, COPD, hypertension, and diabetes).
- Early identification of patient deterioration and timely escalation of care.
- Clear clinical documentation and structured handover.

The Emergency Department practice in our hospital receives patients with a broad range of presentations:

General and Primary Care Conditions:

Respiratory infections, urinary tract infections, skin and soft tissue infections, and chronic disease management.

Paediatrics and Women's Health:

Febrile illnesses, minor trauma, early pregnancy concerns, and gynaecological presentations.

Mental Health:

Initial assessment and risk stratification of patients presenting with psychiatric conditions, with appropriate referral pathways.

Procedural Skills:

Wound care, suturing, incision and drainage of abscesses, and basic fracture management prior to escalation when required.

In all professional interactions, Dr Deva demonstrated sound clinical judgement, professionalism, and effective communication with multidisciplinary teams. She showed special awareness of social context, cultural background, and patient vulnerability, which informed her decision-making and referral processes.
